

The process for you:

- Clinical interviews and questionnaires
 - MRI Scans
 - TMS sessions
- A motivation game

AND

you can get over **\$1000**
in compensation!

This study is a unique opportunity to study symptoms of schizophrenia that are not helped by medication. It will look at a treatment option for “negative symptoms” of schizophrenia, such as low motivation and anhedonia (the inability to enjoy things). Using transcranial magnetic stimulation (TMS) we will use magnetic fields to stimulate areas of the brain associated with these symptoms.

We are looking for
volunteers who:

- Are between 18-55 years old
- Speak fluent English
- Have no substance abuse in the past 3 months
- Are diagnosed with schizophrenia
- Are not claustrophobic
